

EVALUATION OF DIFFERENT COLOR SCHEMES FOR A MOBILE APP USING GIMP

Roll no:240701324

Name: Mohamed Ismail Fawaz K P

Aim

To design and evaluate different color schemes for a mobile banking application dashboard using GIMP. The objective is to create visually appealing dashboard screens with different themes and identify a suitable color combination that improves readability, user experience, and overall interface appearance.

Procedure

1. Requirement Analysis

- Identified the need for an attractive and user-friendly dashboard interface for a banking application.
- Selected the dashboard screen as the main interface for color scheme evaluation.
- Planned to create multiple dashboard designs using different color themes.

2. Planning the Dashboard Layout

- Designed a simple mobile banking dashboard layout containing:
 - User welcome section
 - Account balance card
 - Quick action buttons
 - Recent transaction section
 - Bottom navigation bar
- Ensured that the layout remained the same in all designs so that only the color schemes could be compared.

3. Selecting Color Schemes

Three different color themes were chosen for evaluation:

1. Blue Theme

- Represents trust, professionalism, and security.

2. Green Theme

- Represents growth, safety, and freshness.

3. Purple Theme

- Represents modern design and premium appearance.

4. Creating the Dashboard Designs in GIMP

- Opened a new workspace in the software.
- Set the mobile screen dimensions for dashboard design.
- Used design tools such as:
 - Rectangle Tool
 - Gradient Tool
 - Text Tool
 - Layer Management
 - Color Fill Tool

5. Designing Individual Dashboard Screens

Blue Theme Dashboard

- Applied dark blue background gradients.
- Used light blue highlights for buttons and cards.
- Added white text for better readability.

Green Theme Dashboard

- Applied green gradient backgrounds.
- Used soft green shades for action buttons.
- Maintained balanced contrast for visibility.

Purple Theme Dashboard

- Applied purple gradient backgrounds.

- Used violet highlights for interface components.
- Designed a modern and stylish appearance.

6. Maintaining UI Consistency

- Kept all dashboard components identical across themes.
- Maintained equal spacing, alignment, and typography.
- Ensured consistent icon placement and navigation structure.

7. Reviewing and Comparing the Designs

- Compared the three dashboards based on:
 - Visual appearance
 - Readability
 - Color contrast
 - User friendliness
 - Professional look
- Observed how different colors affected the overall interface feel and usability.

8. Exporting the Final Designs

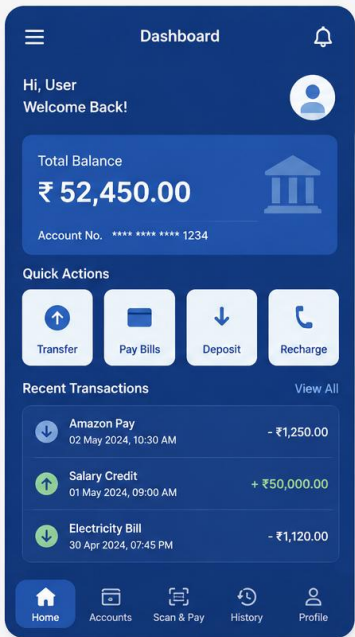

- Saved the editable project file.
- Exported the dashboard screens as PNG images for presentation and documentation purposes.

Result

Three different mobile banking dashboard designs with Blue, Green, and Purple color schemes were successfully created using GIMP.

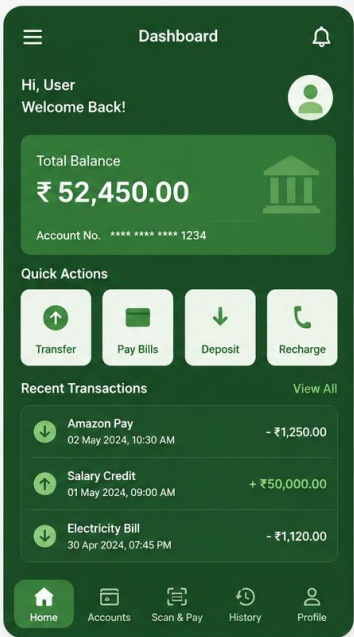

The dashboards effectively demonstrated how different color combinations influence the appearance, readability, and usability of a mobile banking application. The experiment helped in identifying suitable themes for banking interfaces and provided better understanding of color selection in UI/UX design.

COLOR SCHEME EVALUATION – BANKING APP DASHBOARD (MADE IN GIMP)

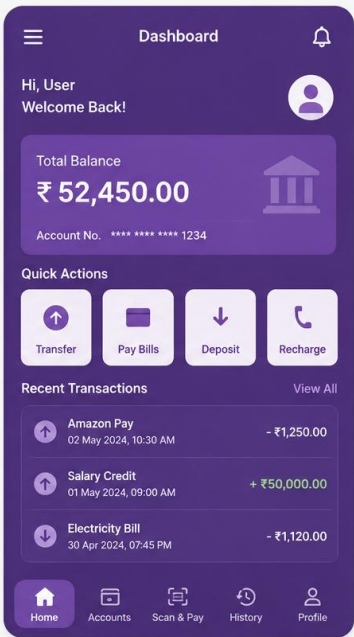

BLUE SCHEME

Five color swatches representing the blue scheme: dark blue, medium blue, light blue, very light blue, and white.

GREEN SCHEME

Five color swatches representing the green scheme: dark green, medium green, light green, very light green, and white.

PURPLE SCHEME

Five color swatches representing the purple scheme: dark purple, medium purple, light purple, very light purple, and white.
