

EXPERIMENT 9

Design input forms that validate data (e.g., email, phone number) and display error messages using HTML/CSS, JavaScript (with Validator.js)

REG NO: 240701324

Name: Mohamed Ismail Fawaz K P

AIM:

The aim is to design input forms that validate data, such as email and phone number, and display error messages using HTML/CSS and JavaScript with Validator.js.

PROCEDURE:

Step 1: Setting Up the HTML Form

```
<form id="validationForm">
```

```
  <input type="text" id="email" placeholder="example@gmail.com">
```

```
  <p id="emailError"></p>
```

```
  <input type="text" id="phone" placeholder="10-digit number">
```

```
  <p id="phoneError"></p>
```

```
  <button type="submit">Submit</button>
```

```
</form>
```

Step 2: Styling the Form with CSS

```
body {  
  display: grid;  
  place-items: center;  
  font-family: sans-serif;  
}
```

```
.card {  
  background: #fff;  
  padding: 20px;  
  border-radius: 8px;  
}
```

```
input {  
  width: 100%;  
  padding: 10px;  
  border: 1px solid #ccc;  
}
```

```
.error-message {  
  color: red;  
  font-size: 14px;  
}
```

```
button {  
  width: 100%;
```

```
background: green;
color: white;
padding: 10px;
border: none;
}
```

Step 3: Adding JavaScript for Validation

```
const form = document.getElementById("validationForm");
const email = document.getElementById("email");
const phone = document.getElementById("phone");

function validateEmail() {
  if (validator.isEmpty(email.value) || !validator.isEmail(email.value)) {
    document.getElementById("emailError").textContent = "Invalid email";
    return false;
  }
  document.getElementById("emailError").textContent = "";
  return true;
}

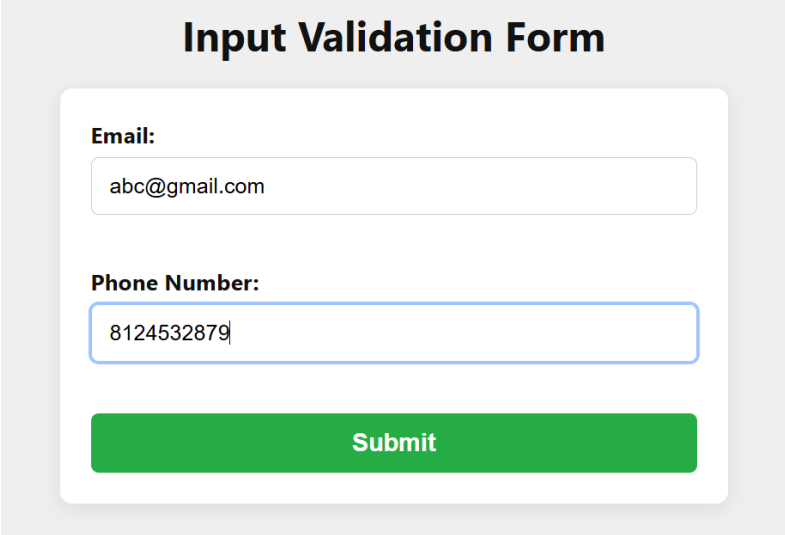

function validatePhone() {
  let num = validator.whitelist(phone.value, "0-9");

  if (!validator.isLength(num, { min: 10, max: 10 })) {
    document.getElementById("phoneError").textContent = "Invalid phone";
    return false;
  }
}
```

```
}  
  
document.getElementById("phoneError").textContent = "";  
  
return true;  
}  
  
form.addEventListener("submit", (e) => {  
  if (!validateEmail() || !validatePhone()) {  
    e.preventDefault();  
  }  
});
```

OUTPUT:

1. For valid email address and phone number

The screenshot displays a web form titled "Input Validation Form". It contains two input fields: "Email:" with the value "abc@gmail.com" and "Phone Number:" with the value "8124532879". Both fields have a blue border, indicating they are valid. Below the fields is a green "Submit" button.

Input Validation Form

Email:
abc@gmail.com

Phone Number:
8124532879

Submit

2. Error message for invalid email

Input Validation Form

Email:

abc@gmail

Please enter a valid email address.

Phone Number:

8124532879

Submit

3. Error message for invalid phone number

Input Validation Form

Email:

abc@gmail.com

Phone Number:

humaid

Please enter a valid phone number.

Submit
